

Test Cases

Feature: Animation Generation	Action	Expected Result
Test Case 1	Click Play/Resume Animation Button	Animation Pauses on Frame; Animation Resumes on the same Frame
Test Case 2	New Data from csv file is loaded	The animation begins using new data, and recording starts automatically from the first frame of the new dataset. The video is then saved as a .webm.?
Test Case 3	User Selects CSV file that is missing required columns (e.g. LeftEyeForwardX, or any required header)	Prevent animation from starting. An error message is displayed stating that the CSV is invalid.

Feature: Read and Write Data to Database	Action	Expected Result
Test Case 1	Reads data from the CSV Data Samples	Cleans the sample dataset
Test Case 2	Reads back data from SQLite for Animation	App connects to the SQLite database file (correct file path)
Test Case 3	Database Error Handling	No partial data is written If DB fails, animation doesn't start

Test Cases

Feature: UI Things and Stuff	Action	Expected Result
Test Case 1	User clicks Play, then Pause, then Play again during the animation playback	Animation pauses on the current frame and resumes from the same frame, without skipping frames or restarting
Test Case 2	Load a new valid CSV file after a previous dataset was already animated	Animation resets to frame 0 of the new dataset, begins playback using new data
Test Case 3	Allow animation to run with recording enabled until completion	A .webm video file is generated successfully and saved with a unique name
