

Cycle 1 Notes

Summary

During this scrum cycle, the initial stages for the frontend UI, the data cleaning, and the animation generation features were implemented. For the frontend UI, the ability for the user to open a csv file with code to ensure they provide the correct file type was implemented, along with pop-up notifications to keep the user informed with progress. The data cleaning was implemented by reading the csv file and converting it to JSON for easier access.

Plans for the Next Cycle

During the next scrum cycle,
