

Test Cases

Feature: File Upload	Action	Expected Result
Test Case 1	Click “Import File” and select a valid .csv file containing correctly formatted data.	The system loads the file without errors.
Test Case 2	Check that a file preview or confirmation message appears.	File preview is displayed, confirming the number of rows/columns detected.
Test Case 3	Attempt to upload an unsupported file type (e.g., .txt).	The system displays an error message indicating invalid file type.

Feature: Data Cleaning	Action	Expected Result
Test Case 1	Open the Data Cleaner interface.	Loaded dataset appears with all columns visible.
Test Case 2	Click “Clean Data.”	System removes duplicates, fills missing values with default or mean, and flags any outliers.
Test Case 3	Inspect the log/output summary.	Summary displays the number of cleaned entries and any unresolved data issues.

Test Cases

Feature: Animation Generator	Action	Expected Result
Test Case 1	Select “Generate Animation.”	Progress indicator or spinner appears.
Test Case 2	Wait for completion.	The animation is rendered and previewed in the display window.
Test Case 3	Click “Export.”	Export dialog opens, and the final video file saves successfully.

Feature: User Interface	Action	Expected Result
Test Case 1	Resize window from 1920×1080 to 1280×720.	Layout adjusts dynamically; no overlapping or hidden elements.
Test Case 2	Hover and click on navigation buttons.	Buttons highlight and trigger correct view changes.
Test Case 3	Attempt a workflow from file import → clean → animate.	Navigation between modules is seamless; no UI freezing or lag.
